

360Retrieve

Comprehensive data analytics for structured and unstructured data

360Retrieve is an up-to-the-minute data analytics suite that adds value to any organisation, in any part of their business.

This sophisticated but easy to use online data analytics platform provides the operational Management and Business Information an organisation needs.

The platform gives every level of the business access to relevant information and self-service tools, allowing flexible manipulation of data on demand.

360Retrieve puts business intelligence at your fingertips

360Retrieve's unique ability to interrogate both structured and unstructured data, gives an insurer access to 100% of their business information by turning any document or text into instantly searchable data.

360Retrieve can connect and extract data from most other database types, delivering full analytics and visualisation capability.

Benefits include:

- > No upfront license fees, as the cost is included in the per claim pricing model for 360Siteview or charged on a transactional basis
- > Full analytics and visualisation capability
- > Ability to interrogate both structured and unstructured data
- > Data can be enriched by any external data source
- > Visualisation in over 600 different ways
- > Embedded self-service data analytics function.

360Globalnet

360Retrieve

Comprehensive anti-fraud system for insurers

Brings together structured and unstructured data from multiple sources, putting the power to identify red-flagged issues, in the hands of investigators.

360Retrieve – Anti-Fraud offers:

- > Unique unstructured data technology which turns CNF's fully searchable (equally applicable to Medical Packs etc.)
- > Ability to interrogate unstructured correspondence alongside structured data
- > Ability to establish regular search routines and internal watch lists
- > Ability to interrogate most database types whether internal or external
- > Ability to incorporate both internal and external data sources, including commercial, sanctions and other Government datasets.
- > Access to 360's proprietary watch lists, with persons and organisations of interest captured from open-source data worldwide

The system goes one step beyond link-charting, to tell you exactly what red-flagged issues you should be aware of

Benefits include:

- > 45% more red-flagged personal injury claims than incumbent proprietary systems
- > White noise / false positives reduced to between 4-7% for personal injury cases
- > In the first 3 months of operation a client found 27 organised fraud rings.
