

# PowerRetrieve

We are pleased to announce that PowerRetrieve v6.0 is now available for distribution and as an upgrade for v5.x users.

## Version 6 at a glance:

- New branding and support for Windows themes
- Multi Search Tabs available as part of the core functionality
- Saved Searches and Search History
- Multi-select Document Update (flags/properties/notes)
- Release Licence functionality added
- Annotation summary enhancement
- Updated Database engine, PDF rendering and OCR engine
- Capture sub system improvements

## Multi Search Tabs

With Multi Search Tabs, users are able to maintain the results of multiple document queries across different areas of the Fileroom. The search results and the document viewers are maintained inside each search tab.

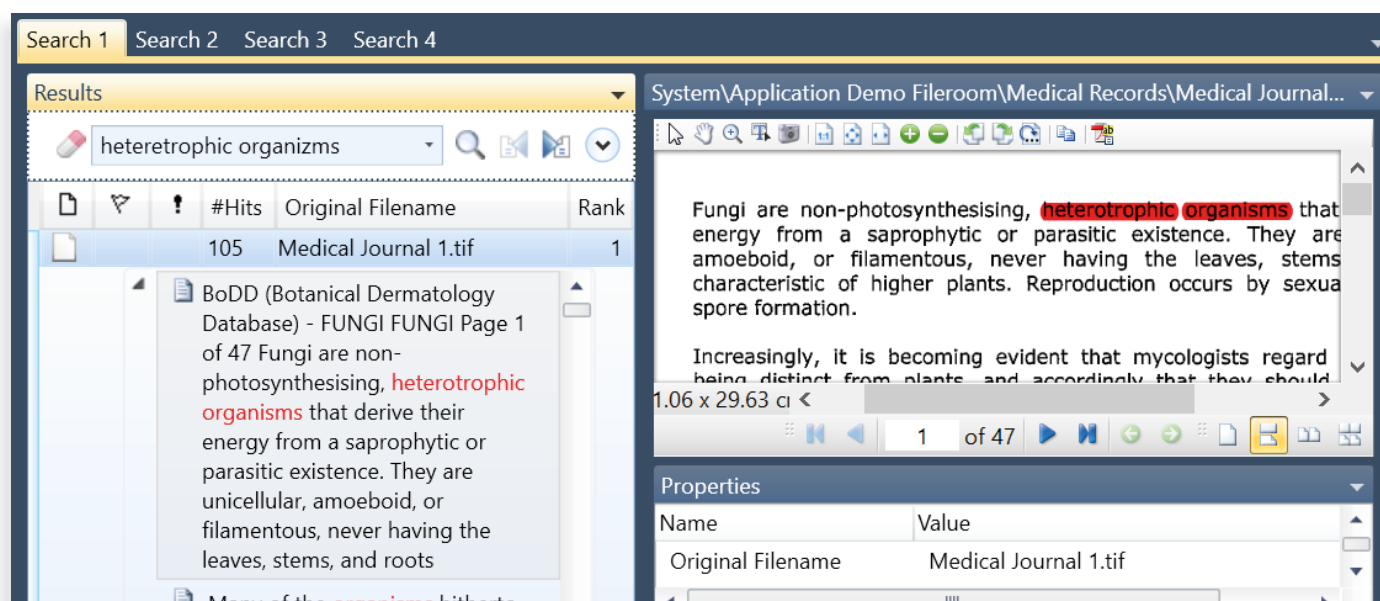

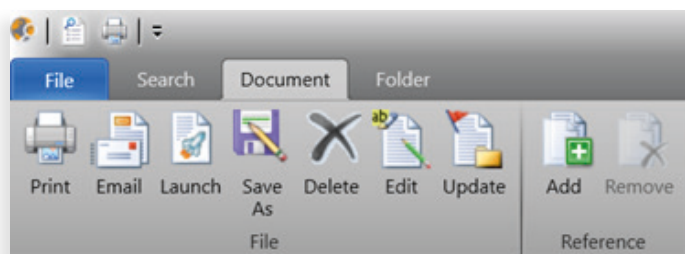

Up to 4 Search Tabs are available to allow users to more easily cross reference the information gleaned from a range of different search criteria.

## New Branding and Windows Theme Support

PowerRetrieve v6 comes with a brand new application icon and splash screen.

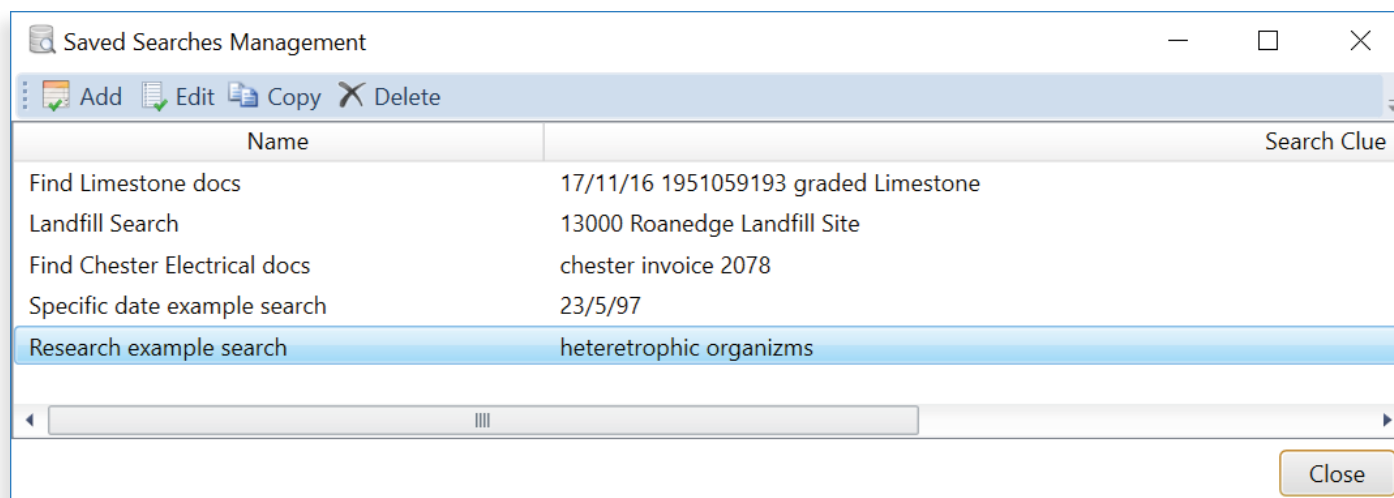

Users also have control of the colour pallet used for the Graphical User Interface for a personalised user experience. A sample of the 'Office Black' theme is shown below.

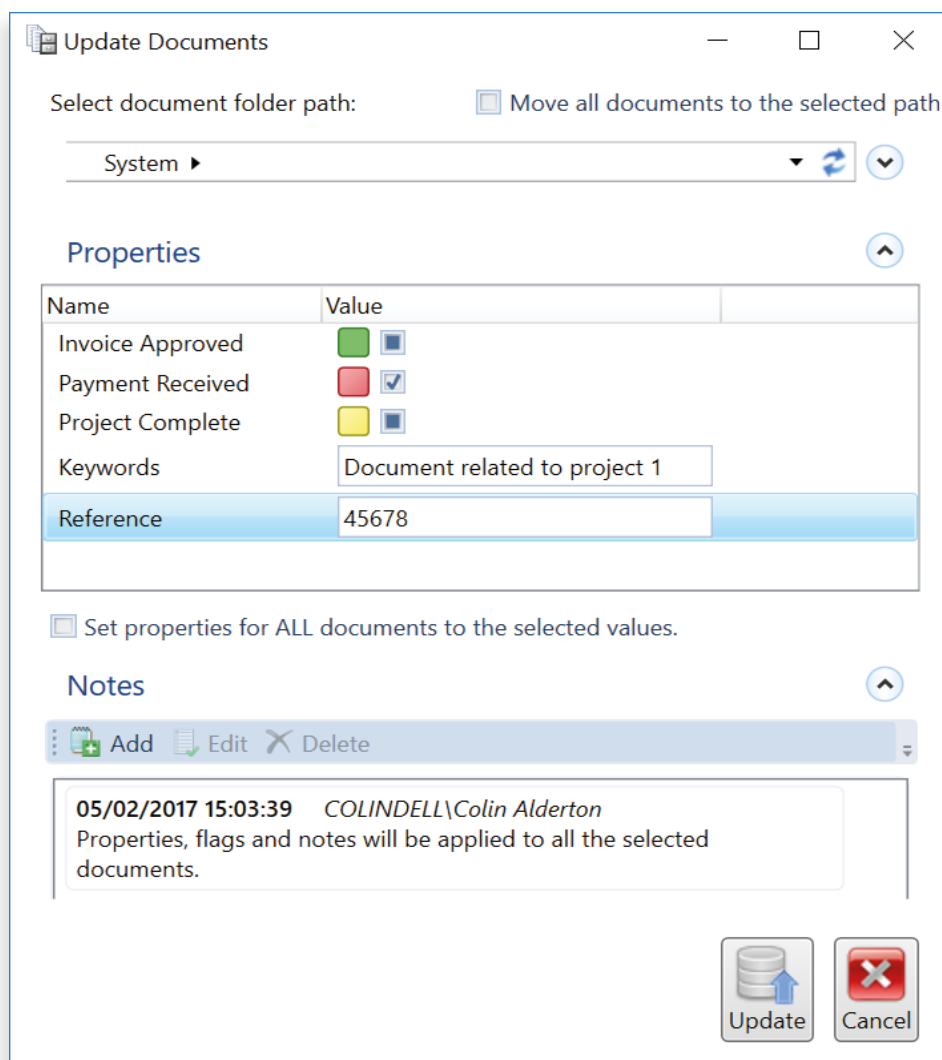

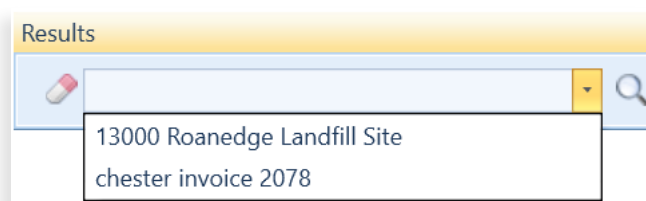

## Saved Searches and Search History

Users are now able to save and recall search queries using the new 'Saved Searches Management' interface.

In addition, PowerRetrieve automatically remembers all the searches used during the current session in a handy drop down list.

## Document Update

Users are now able to multi-select a group of documents and apply

- > property fields,
- > flags and notes

to all the documents in one operation.

Users are also able to move a group of selected documents from one document folder to another.

# Release Licence

PowerRetrieve Administrators are now able to view all the user and process sessions that are using licences.

System Information			
Licence Information			
Session Information			
Session Information

Release

Active users can be remotely logged off and their licences released.

# Annotation Summary Enhancement

Annotation summary information is now available in the PowerRetrieve Edit window allowing users to easily jump to the pages that contain annotations.
